The authors, editor, and publisher have made every effort to provide accurate information. However, they are not responsible for errors, omissions, or for any outcomes related to the use of the contents of this book and take no responsibility for the use of the products and procedures described. Treatments and side effects described in this book may not be applicable to all people; likewise, some people may require a dose or experience a side effect that is not described herein. Drugs and medical devices are discussed that may have limited availability controlled by the Food and Drug Administration (FDA) for use only in a research study or clinical trial. Research, clinical practice, and government regulations often change the accepted standard in this field. When consideration is being given to use of any drug in the clinical setting, the health care provider or reader is responsible for determining FDA status of the drug, reading the package insert, and reviewing prescribing information for the most up-to-date recommendations on dose, precautions, and contraindications, and determining the appropriate usage for the product. This is especially important in the case of drugs that are new or seldom used.

# Acknowledgments

Every textbook is completed because of the support and help from a variety of people. The authors wish to offer a big thank you to Christine Sanders, CMA(AAMA), an Instructor at Hodges University's Medical Assisting program, who provided valuable feedback as we developed this text. We never would have completed the text without the typing and error-checking skills of Amy Mulligan, a Hodges University student who has gone on to graduate school to become a Physician Assistant.

Our families were an important part of the process. During previous projects, Bill Harrison spent lonely hours as Carlene worked. This time, however, he contributed by reviewing and reading as if he were a student to help this text be as clear as possible.

Valerie could not have accomplished writing the text without the much-needed support and encouragement of her husband, Shad White. He spent every weekend for months taking their two young children, Harrison and Kyra, on fieldtrips away from the house so Valerie could write. Valerie's parents, who are affectionately known as Gramsy and Pal, also were fabulous babysitters during those intense months of writing and teaching.
