

Contents

Preface	xiii
1 Euclidean Space and Vectors	1
1.1 The Cartesian Coordinate System	3
1.2 Vectors	19
1.3 Vector Products	30
1.4 Lines and Planes	46
1.5 End of Chapter Exercises	57
2 Parametric Curves and Vector Fields	63
2.1 Parametric Representations of Curves	66
2.2 The Derivative of a Parametrization	81
2.3 Modeling with Parametric Curves	95
2.4 Vector Fields	110
2.5 Modeling with Vector Fields	124
2.6 End of Chapter Exercises	136
3 Differentiation of Real-Valued Functions	143
3.1 Representation and Graphical Analysis of Functions	145
3.2 Directional and Partial Derivatives	164
3.3 Limits and Continuous Functions	183
3.4 Differentiable Functions	193
3.5 The Chain Rule and the Gradient	203
3.6 End of Chapter Exercises	215

4	Critical Points and Optimization	223
4.1	Graphical Analysis of Critical Points	225
4.2	Algebraic Classification of Critical Points	238
4.3	Constrained Optimization in the Plane	251
4.4	Constrained Optimization in Space	262
4.5	End of Chapter Exercises	275
5	Integration	281
5.1	Riemann Sums—An Intuitive Introduction	283
5.2	Integration of Functions of Two Variables	294
5.3	Integration in Polar Coordinates	312
5.4	Integration of Functions of Three Variables	321
5.5	Integration in Cylindrical Coordinates	335
5.6	Integration in Spherical Coordinates	345
5.7	End of Chapter Exercises	358
6	Integration on Curves	367
6.1	Path Integrals	369
6.2	Line Integrals	381
6.3	Integration over Closed Curves	399
6.4	End of Chapter Exercises	416
7	Integration on Surfaces	421
7.1	Parametrization of Surfaces	423
7.2	Surface Integrals	435
7.3	Flux Integrals	445
7.4	The Divergence Theorem	457
7.5	Curl and Stokes' Theorem	466
7.6	Three Proofs	474
7.7	End of Chapter Exercises	489
Appendix	Solutions to Selected Exercises	497
1.1	The Cartesian Coordinate System	497
1.2	Vectors	498
1.3	Vector Products	499
1.4	Lines and Planes	500
2.1	Parametric Representations of Curves	502
2.2	The Derivative of a Parametrization	503
2.3	Modeling with Parametric Curves	504
2.4	Vector Fields	505
2.5	Modeling with Vector Fields	506

3.1	Representation and Graphical Analysis of Functions	507
3.2	Directional and Partial Derivatives	509
3.3	Limits and Continuous Functions	510
3.4	Differentiable Functions	511
3.5	The Chain Rule and the Gradient	512
4.1	Graphical Analysis of Critical Points	513
4.2	Algebraic Classification of Critical Points	514
4.3	Constrained Optimization in the Plane	515
4.4	Constrained Optimization in Space	516
5.1	Riemann Sums—An Intuitive Introduction	518
5.2	Integration of Functions of Two Variables	520
5.3	Integration in Polar Coordinates	521
5.4	Integration of Functions of Three Variables	522
5.5	Integration in Cylindrical Coordinates	523
5.6	Integration in Spherical Coordinates	524
6.1	Path Integrals	525
6.2	Line Integrals	526
6.3	Integration over Closed Curves	527
7.1	Parametrization of Surfaces	528
7.2	Surface Integrals	529
7.3	Flux Integrals	530
7.4	The Divergence Theorem	531
7.5	Curl and Stokes' Theorem	531
7.6	Three Proofs	532
