Transition Guide

Major Changes in the 5th edition

- Updated 2-color design with 180+ revamped illustrations
- An additional 500 references
- Clinical summaries of the diagnostic literature for orthopedic areas (see Translations Into Clinical Practice [TIPS]) at the end of orthopedic-related chapters
- For select chapters, a new graphical representation of likelihood ratios for tests involving the cervical and lumbar spine, the shoulder, and the knee.
- A widely expanded Pharmacology for the Chiropractor appendix. This expansion focuses on the mechanisms of common categories of medications prescribed for common complaints encountered in clinical practice by most chiropractors.
- A new appendix on how to incorporate literature evidence into practice and how to interpret the literature. There is a special emphasis on how practitioners can measure in their own practices; the scientist-clinician.
- Updated algorithms
- Expanded sections on:
 - Pain
 - Weakness

- Stroke
- Concussion
