

# XML Features in Access 2007

## Windows Vista Virtual Directory Setup

To successfully work with the Chapter 29 examples on a Windows Vista computer, please follow these instructions to set up the virtual directory for this chapter.

➔ **Note:** If your system is running on Vista, you should use these instructions instead of the book's step 2 in Hands-On 29-1. Start by performing step 1 as instructed in the book. For step 2, follow these instructions, then continue with step 3 as instructed in the book.

### Creating a Virtual Directory on Windows Vista

1. Click the **Start** button and open the **Control Panel**.
2. Click on the **System and Maintenance** link, and then choose **Administrative Tools**, as shown in Figure 1.

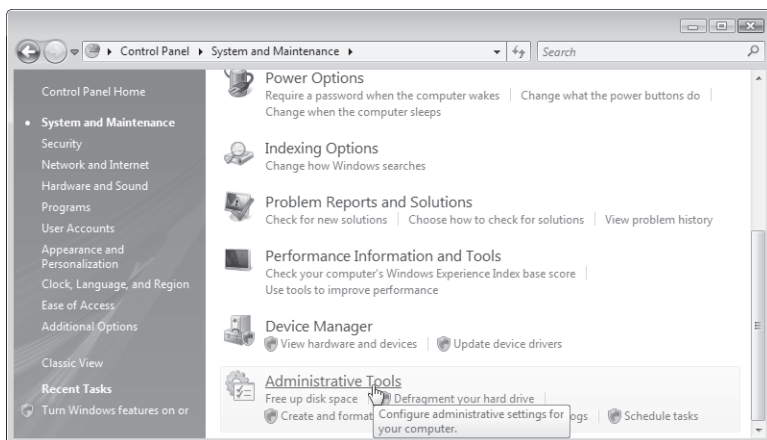

Figure 1

3. Double-click **Internet Information Services (IIS) Manager** as shown in Figure 2.

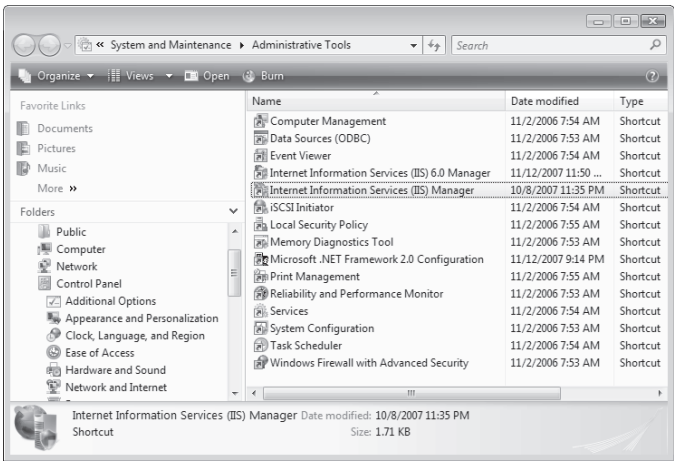

Figure 2

4. Click **Continue** in the User Account Control (UAC) window to give Windows your permission to continue.
5. Expand the tree nodes in the Connections pane on the left, right-click on **Default Web Site**, and select **Add Virtual Directory** as shown in Figure 3.

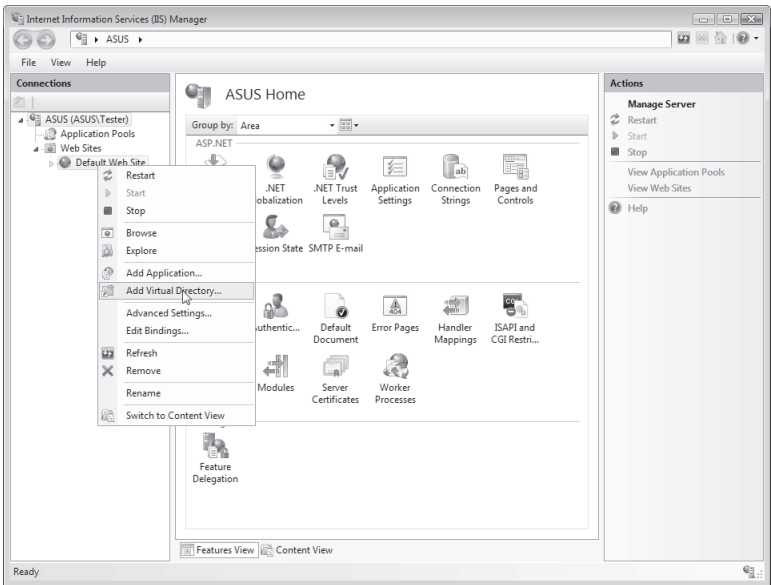

Figure 3

6. Type **xml** in the Alias box as shown in Figure 4. Set the Physical path to point to the **C:\Learn\_XML** folder that you created in the book's Hands-On 28-1. You can set the path to this folder by typing its name directly in the Physical path box or by clicking on the  button.

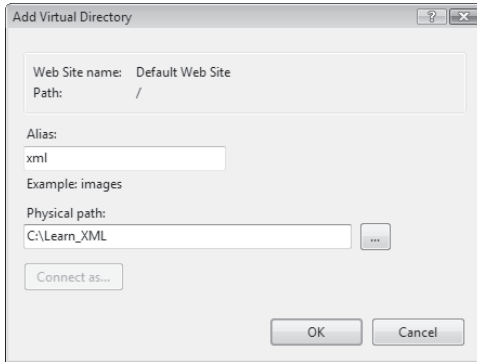

Figure 4

7. Click **OK** to save the changes.

Notice the virtual directory named **xml** now appears under **Default Web Site** in the **Connections** pane.

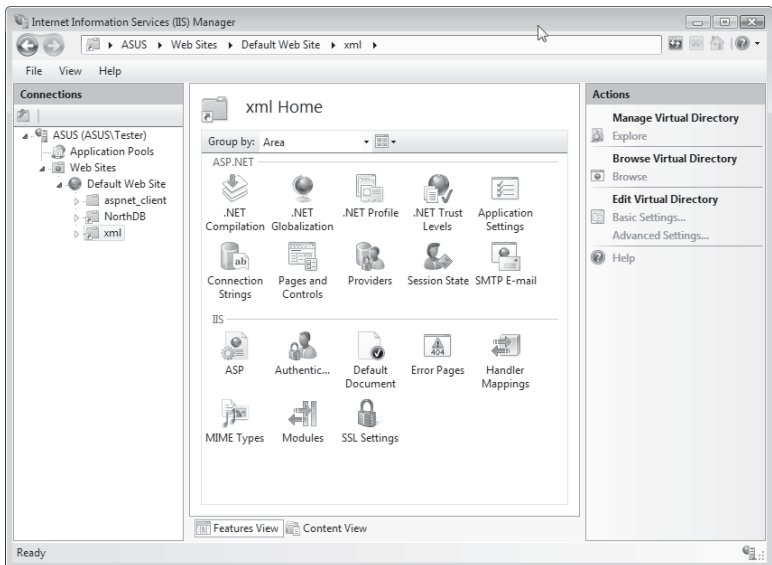

Figure 5

8. Close the Internet Information Services (IIS) Manager window, and then close all Control Panel windows.
9. Continue with step 3 in the book's Hands-On 29-1.
